

You are invited: To pot- up your transplants

WHEN: ANYTIME YOUR BABY PLANTS ARE OUT-
GROWING THEIR POT, PREFERABLY BEFORE THEY
SHOW SIGNS OF STRESS.

LOCATION: YOUR WINDOWSILL

WAIT, WHEN?

OBSERVE YOUR PLANTS

**INCREASE THE SIZE OF GROWING CONTAINER
BEFORE THEY SHOW SIGNS OF STRESS**

You can pull your transplants out to see if their roots are getting crowded & growing around and around the edges.

If you started some seeds in tiny pots or growing medium that has no nutrients, they will need more nutrients at some point. Don't wait for yellowing or weakness, just pot them up into a bigger container with potting mix!
